Name	Title	Telephone-Day	Telephone-Night
1. Lisa Medina	Environmental Health Director	209-754-6744	209-897-0302
2. Mark Landau	REHS	209-754-6745	N/A

NOTIFICATION PLAN

Describe methods or combinations of methods to be used (radio, television, door-to-door, sound truck, etc.) For each section of your plan give an estimate of the time required, necessary personnel, estimated coverage, etc. Consideration must be given to special organizations, particularly non-English speaking groups and outlying water users. (Use another sheet of paper if necessary.)

Please use this area for your notification plan: (use additional sheets of paper if needed)

Normal Emergencies:

The City of Angels experiences occasional emergencies such as pipe breaks, valves stick, hydrants are broken, and power outages. These are anticipated and can generally be handled without any extra work load or extraordinary measures having to be taken. Water treatment plant operators are on-call 24/7 on a rotational basis to handle such emergencies.

Extraordinary Emergencies:

In the United States, water utilities may be affected by natural disasters such as hurricanes, floods, tornados, high winds, earthquakes, forest or brush fires, and drought. Other emergencies may be the result of riots, employee work stoppages, vandalism, civil disorders, sabotage, acts of terrorism, accidental and non-accidental chemical contamination or spills, massive equipment failures, explosions or incendiary fires, and even nuclear warfare resulting in blast damage and radiation fallout.

Each disaster or emergency has a particular effect on different parts of the utility. However, the damage to one part of the system may affect other parts of the utility.

A water utility has four subsystems to consider: (a) collection, (b) transmission, (c) treatment, and (d) distribution. Within each of these subsystems, critical components such as power, personnel, materials and supplies, and communications have been examined in order to develop an emergency plan. Equipment and structures have also been considered.

The following potential extraordinary emergencies have been identified for the City of Angels service area and are listed in order of highest likelihood of occurrence:

1. Process Control Failure
2. Major Fire
3. Earthquake
4. Notification by the RWQCB that an imminent danger to the health of the water user exists.

Communications Network:

In the event of a system emergency, an Emergency Operations Center will be established at the City of Angels Water Treatment Plant. This plant has provisions to generate emergency power. The water treatment plant telephone line (209-736-0790) shall be utilized in an emergency to contact suppliers for necessary materials and or support as needed.

The following agencies shall be contacted by City Water Department personnel at the time the Emergency Operations Center is activated:

1. State Water Resources Control Board - (209) 948-7696
2. Calaveras County Department of Environmental Health - (209) 754-6399
3. KVML 1450 AM and 102.7 FM, (209) 532-6397, KKBN 93.5 FM, (209) 532-9350, and KZSQ 92.7 FM (209) 532-9270.
4. Calaveras Enterprise - (209) 754-3861
5. Union Democrat – (209) 532-7151
6. Calaveras County Office of Emergency Services - (209) 754-6303

The public shall be kept informed via the above numbers 3, 4, and 5 regarding the type of emergency, estimated schedule for repairs, location of water distribution points, and any further information deemed necessary by the City Administrator.
